## DETAILED ACTION

### *Claim Objections*

Claim 17 is objected to because of the following informalities: at the end of the claim, the punctuation “;” should be replaced by a period “.”. Appropriate correction is required.

### *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 17-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wichelman (6,785,540) in view of Bergstrom et al (6,131,013).

Regarding claim 17, Wichelman discloses (Figs. 2, 3A-3E) a method for measuring multiple signals, comprising the following steps:

(a) representing on a display a signal for each measured frequency channel.

See column 11, lines 12-25; column 12, lines 39-45; and the ABSTRACT.

Wichelman fails to disclose the displaying masks.

However, Bergstrom discloses (Figs. 6, 7, and 20) a method of using masks for filtering signals. See column 5, lines 9-13; column 13, line 34 to column 14, line 54.

It would have been obvious to a person of ordinary skill in the art to use the mask signal type of Bergstrom into the multiple signals display system of Wichelman to perform the general signals filtering to provide a better signals display system.

Art Unit: 2672

Regarding claim 18, since Bergstrom teaches the method of using masking for filtering signals, it is obvious that the filtering is performing outside the channel amplitude limits.

Regarding claim 19, it is obvious that using masking technique of filtering signals would also allow the measuring the quality of the signals by using the signal to noise ratio (SNR), etc.

Regarding claim 20, counting the mask hits in the signals measuring system is well known in the art.

#### ***Allowable Subject Matter***

Claims 1-16 are allowed.

#### ***Response to Arguments***

Applicant's arguments with respect to claims 1-20 have been considered but are moot in view of the new ground(s) of rejection.
